SKILLS

Languages: Kotlin, Java, Go, TypeScript, C++, Swift

Mobile: Android (Compose, Coroutines, MVVM, JNI), iOS (Swift, UIKit), React Native, Flutter, Expo

Backend & Infra: Go, gRPC, Protobuf, Ktor, Redis, Firebase, CI/CD

AI & Agents: LLM Agents, LangGraph, Vertex AI, TensorFlow, On-device Inference

Media & Realtime: WebRTC, OpenCV, Mediasoup

WORK EXPERIENCE

07/2024 – Present **Member of Technical Staff (Mobile SDK Lead)** **DevRev.ai**

- Led development of cross-platform Mobile SDKs (Android, iOS, React Native, Expo and Flutter) supporting **30M+ MAU**, driving architecture, public APIs, testing strategy and production reliability.
- Collaborated closely with product, design and customer engineering teams to rapidly ship SDK features and resolve high-priority production issues.
- Co-built a session ingestion pipeline reducing ingestion costs by **90%**.
- Designed and implemented **end-to-end encryption** using asymmetric key exchange and symmetric payload encryption for session data at rest and in transit.
- Designed automated testing and release strategies, reducing production regressions by **60%** while improving SDK stability.
- Owned critical production incidents from debugging through release, directly contributing to **$10M+** in enterprise deals with HDFC, ICICI, Smallcase and other customers.
- Defined SDK architecture, implementation strategy and technical direction while mentoring engineers across multiple mobile platforms.

06/2022 – 07/2024 **Senior Software Engineer** **Epifi (Fi Money)**

- Improved mobile app performance by reducing QR scan latency from **2s to 500ms**, significantly enhancing user experience.
- Led the migration of Fi app from **Google SafetyNet API** to **Play Integrity API**.
- Delivered key UPI features (**TPAP, Lite, Global, Mapper**) for an app with **280K+ daily active users**.
- Improved release reliability by restructuring build variants using **source sets**, eliminating ProGuard-related production issues.
- Built backend RPCs for UPI Mapper and migrated feature flags from Firebase to **Go + gRPC** services.

07/2021 – 06/2022 **Software Engineer Intern** **Huddle01**

- Integrated **Web3** wallets (Ethers.js, WalletConnect) into React applications for token-gated meetings.
- Developed an analytics pipeline from meeting data to **Postgres** using Node.js + TypeScript.
- Implemented **Virtual Backgrounds** using Mediapipe in a real-time video conferencing application.
- Built high-performance real-time mobile SDK components using **Mediasoup** and **JNI**, focusing on low latency and production performance.

PROJECTS & RESEARCH

AI / Open Source **Hermes – React Native BitNet Inference SDK** **GitHub**

- Built a cross-platform React Native SDK for **on-device BitNet LLM inference**, integrating native C++ inference across Android, iOS and Web.
- Implemented **streaming generation, model lifecycle management, cancellation, model caching and runtime inference metrics** for local inference workloads.

AI Agent **ReviewAgent – Autonomous GitHub PR Review Agent** **GitHub**

- Built a persistent autonomous agent that monitors GitHub PRs, provisions isolated **Git worktrees**, analyzes repository changes and publishes structured inline code reviews.
- Implemented **SQLite state management, repository lifecycle management, automated cleanup, retries and remote control** through Slack and Telegram.

MTech Thesis **City-Wide Cascaded Vehicle Path Prediction and Temporal Estimation** **Digital Thesis**

- Built a deep learning + computer vision system to re-identify vehicles across CCTV feeds.
- Achieved **4.81s** MAD in temporal estimation and **69.6%** geo-position accuracy.

EDUCATION

2017 – 2022 **BTech-MTech Dual Degree in Computer Science & Engineering** **CGPA: 8.12/10**
The LNM Institute of Information Technology
